

Task 00 — Yazan and Badr — Define the styling contract

Members: Yazan and Badr

Deliverable: [docs/styling-contract.md](#)

Deadline: 2 October 2026, 23:59 — Damascus time

Context

Agree on the components and their basic style before building the frontend. Review all seven images in [docs/project-screenshots/](#). You may follow the coach's style or choose your own; exact color matching is not required.

Use this heading order in your document:

```
# Styling Contract
## General Style
### Color Palette
### Typography
## Shared Components
### [Component Name]
## Pages
### Mystery Selection Page
#### [Component Name]
### How to Play Page
#### [Component Name]
### Gameplay Page
#### [Component Name]
### Result / Reveal Page
#### [Component Name]
## Agreement and Contributions
```

Describe shared components once and reference them from their pages. Use short tables or lists. For each component, give its purpose, proposed file path, root `className`, pages, and background/text/border or accent colors. Mark unused properties as "not applicable."

Goal

Create one styling contract that both members understand and can use during implementation.

What to build

1. List shared and page-specific components: header/navigation, case cards, instructions, stage heading, clue cards, answer form, feedback, hints, and final reveal. Not every small element needs a separate React component.
2. Suggest filenames, such as `client/src/components/MysteryCard.tsx` and `client/src/pages/MysteriesPage.tsx`. Record paths only; do not create these files.

3. Choose consistent class names, such as `mystery-card`. Add inner classes, such as `mystery-card__title`, only where useful.
4. Define named colors with exact values, such as hex codes, for page/card backgrounds, primary/secondary text, main actions, success, and errors. Assign these colors to components, including relevant default and disabled states.
5. Choose a general font with fallbacks. Components use it unless you document an exception. System fonts are enough; no installation is needed.
6. Record both names, what each person contributed, and your agreement on the file.

Rules

- Create only the Markdown file. No React, CSS, API code, or new dependencies.
- Detailed spacing, sizes, animations, and complete CSS can wait.
- Use clear, consistent names and readable text/background colors. Feedback needs words as well as colors.
- Reuse the gameplay layout for different stages and feedback states.
- The coming-soon card does not require a second mystery.
- Both members must contribute and understand the whole contract.

Test it

- Can you match every major screenshot element to a component entry?
- Does each entry include all details listed in Context?
- Are shared names, classes, and colors consistent across pages?
- Do named colors have exact values? Are the font and fallbacks clear?
- Preview the Markdown: are headings and tables readable?
- Compare both branch copies and explain your choices to each other.

No build or lint check is needed for this Markdown-only task.

Done when

The document covers all four screen types, shared components, and the required style details. Both members have reviewed it, recorded their agreement, and independently pushed identical files for Majed's review.

Working time

Aim for **60–90 minutes together**. Ask about unclear points early.

Submit before **2 October 2026, 23:59 — Damascus time**.

Submitting

Agree on the final file. Each member commits and pushes using their own Git identity. One push does not count for both. Do not push to `main`.

Yazan, from the repository root on `member-yazan`:

```
git add docs/styling-contract.md
git commit -m "Document agreed initial styling contract"
git push origin member-yazan
```

Badr, from the repository root on `member-badr`:

```
git add docs/styling-contract.md
git commit -m "Document agreed initial styling contract"
git push origin member-badr
```

Send Majed your branch's file link. Commit IDs may differ; file contents must match exactly. If you revise the agreement, both members update and push their copies.
