

Task 00 — Majed and Eyad — Define the APIs

Members: Majed and Eyad

Deliverable: `docs/apis-handoff.md`

Deadline: 2 October 2026, 23:59 — Damascus time

Context

The frontend needs APIs to get mystery data and send player actions. Agree on these APIs before writing backend code. Use the project requirements and screenshots as guides. Discuss data names with Maya and Alaa; you can start before their stories are finished.

Goal

Create one agreed list of APIs, with clear names, paths, purposes, and HTTP methods.

What to build

1. Create `docs/apis-handoff.md` with these headings:
 - `# APIs Handoff`
 - `## API List`
 - `## Open Questions`
 - `## Agreement and Contributions`
2. Under API List, add a table with: **API name | URL path | HTTP method | Purpose.**
3. Cover these actions:
 - Get the mystery list — GET.
 - Get one mystery and its current stage — GET with an id in the path.
 - Submit an answer — POST.
 - Request a hint — PATCH, which updates hint usage.
4. Choose clear API names and paths together. Explain what each API returns or changes in one short sentence. Say which API provides the final reveal after completion.
5. List questions that need agreement with Maya and Alaa. Add both names, a short contribution note, and confirmation that you agree on the file.

Rules

- Write documentation only. Do not create endpoints or change application code.
- Use consistent paths, such as a common `/api` prefix. Explain what each path id refers to.
- GET reads data. POST submits the answer. PATCH changes existing hint state.
- Do not expose correct answers or the final reveal before completion.
- Both members must contribute and understand the full API list. Detailed request/response schemas can follow later.

Test it

- Walk through: choose a mystery → read clues → submit an answer → use a hint → finish.
- Can the listed APIs support every step, including another attempt after a wrong answer?

- Does every API have a name, path, method, and clear purpose?
- Compare both submitted files: their contents must match.

No server or code tests are needed for this task.

Done when

The API list covers the game flow, both members agree, and each has committed and pushed the same Markdown file to their own branch.

Working time

Aim for 45–60 minutes together. Submit before **2 October 2026, 23:59, Damascus time**.

Submitting

Each member commits and pushes independently. Do not push to `main`.

Majed, on `member-majed`:

```
git add docs/apis-handoff.md
git commit -m "Document agreed API list"
git push origin member-majed
```

Eyad, on `member-eyad`:

```
git add docs/apis-handoff.md
git commit -m "Document agreed API list"
git push origin member-eyad
```

Send Majed the file link from each branch for the final handoff. Commit IDs may differ; file contents must be identical.
